

# SAMEN NZ FOR THE BEST GERMAN BROWN SWISS!

Prossli

**MAY / JUNE BROWN SWISS BREEDERS SPECIAL!!**

**Only \$24.00** with a minimum order of 20 straws

The Pronto-son out of the former highest German index cow Husslie-Goldfee, was co-sampled in Austria, the Netherlands and Australia. His daughters are medium sized with a lot of dairyness.

The feet & legs are impressive. Very dry hocks and strong pasterns combined with high enough foot angles and very good locomotion. The udders of the Prossli's are small with a nice texture. The fore udder attachment is the weaker point of the udder composite but the rear udder attachment, the central ligament and the correct teat placement and length are strong benefits of Prossli. During the past two years Prossli gained steadily in his productive lifetime index. With a PL-index of 130 he is the longevity-star. This underlines his qualities to sire very functional, profitable and longlasting cows for all environments. In the new ECO-index-list Prossli is #2 thanks to his enormous constitution figures. Prossli is used as sire of sons in several countries and also in crossbreeding systems. We can highly recommend him for heifer inseminations.

Vigace

**Only \$12.00 per straw!**

Great prospect for superb type and production. Dam produces lactations over 12000 litres with 4.6% Fat and 4.3% Protein. Outstanding young sire with nice blend of USA and German genetics. Vigace will suit many breeding programs as he has plenty of milk in the genes.
